Problem Statement

Inventory Management System for Retailers:

Retail inventory management is ensuring you carry merchandise that shoppers want, with neither too little nor too much on hand. By managing inventory, retailers meet customer demand without running out of stock or carrying excess supply.

To create effective retail inventory management that results in lower costs and a better understanding of sales patterns. It must include tools and methods that give retailers more information on which to run their businesses. It should ask retailers to create their accounts by providing essential details. Retailers should be able to access their accounts by logging into the application.

Once retailers successfully log in to the application they should be able to update their inventory details, also users will be able to add new stock by submitting essential details related to the stock. They should be able to view details of the current inventory.

The System should automatically send an email alert to the retailers if no stock is found in their accounts. So that they can order new stock.
